Keeps the noise down

“In an open workspace there is nothing more annoying than noises you don’t want to hear. But here comes Acousto, a luminaire that features acoustic panels providing excellent absorption of sounds, making your area not only quieter but also more intimate.

Think about Acousto when creating large open spaces with a majority of hard surfaces and an echo. Especially if you seek a different and green solution. The natural MOSSwall panels absorb the noise but also bring nature indoors and are maintenance free. How cool is that?

A glimpse of nature

Create a well-being atmosphere by using MOSSwall pannels that don't only absorb the noise but also bring the nature inside and are maintainance free. How cool is that?

100 % natural moss

MOSSwall® is produced from a natural lichen by using a 100% ecological application. It requires a 40 - 50% relative humidity level and does not appreciate direct sunlight. If the humidity drops below 40%, the lichens crystallize and dries, signalling the atmospheric change.

It's 100 % maintenance-free and certified as fire-resistant. MOSSwall® panel has a 3-year warranty.

Create your acoustic cloud

Think about Accusto when creating large and open spaces with a majority of hard surfaces and an echo, or when you simply seek for a different, efficient and green solution to effectively combat office noise.

Work under maximum comfort

Acousto features A-class sound absorption. Measurements show that Mosswall® absorbs lower frequencies better, while Ecophon™ has better performance with speech frequencies.

Low tones Mid tones High tones

Be creative in compositions

Get inspired and draw your light as big and as bold as you want. Integrate it in the space and give your visitors a reason to look up. Acousto is with its universal form both decorative and at the same time fulfills sound absorption requirements.

Perfect joints, no light gaps

With an innovative twist and lock joint element the assembly between two modules is now quick and easy and the profiles are strongly connected with no risk of bending. The light has absolutely no possibilities to escape. And that's why we call it NLG - No Light Gap.
