Retail's first choice

Rulo is everything a spotlight should be – no more, no less. Its simplicity is its strength, delivering maximum efficiency and top-tier performance at an excellent price performance ratio.

This makes it ideal for retail environments and other applications where economic efficiency matters. It also features a wide beam-angle selection and special lenses offering high visual comfort.

Outstanding 92% Efficiency

Rulo's high-performance lenses achieve an exceptional efficiency of up to 92%, delivering up to 141 lm/W and a total light output of up to 3600 lumens.

In environments where lighting operates almost continuously throughout the day, such efficiency translates into significant energy savings.

It is more compact than other comparable spotlights

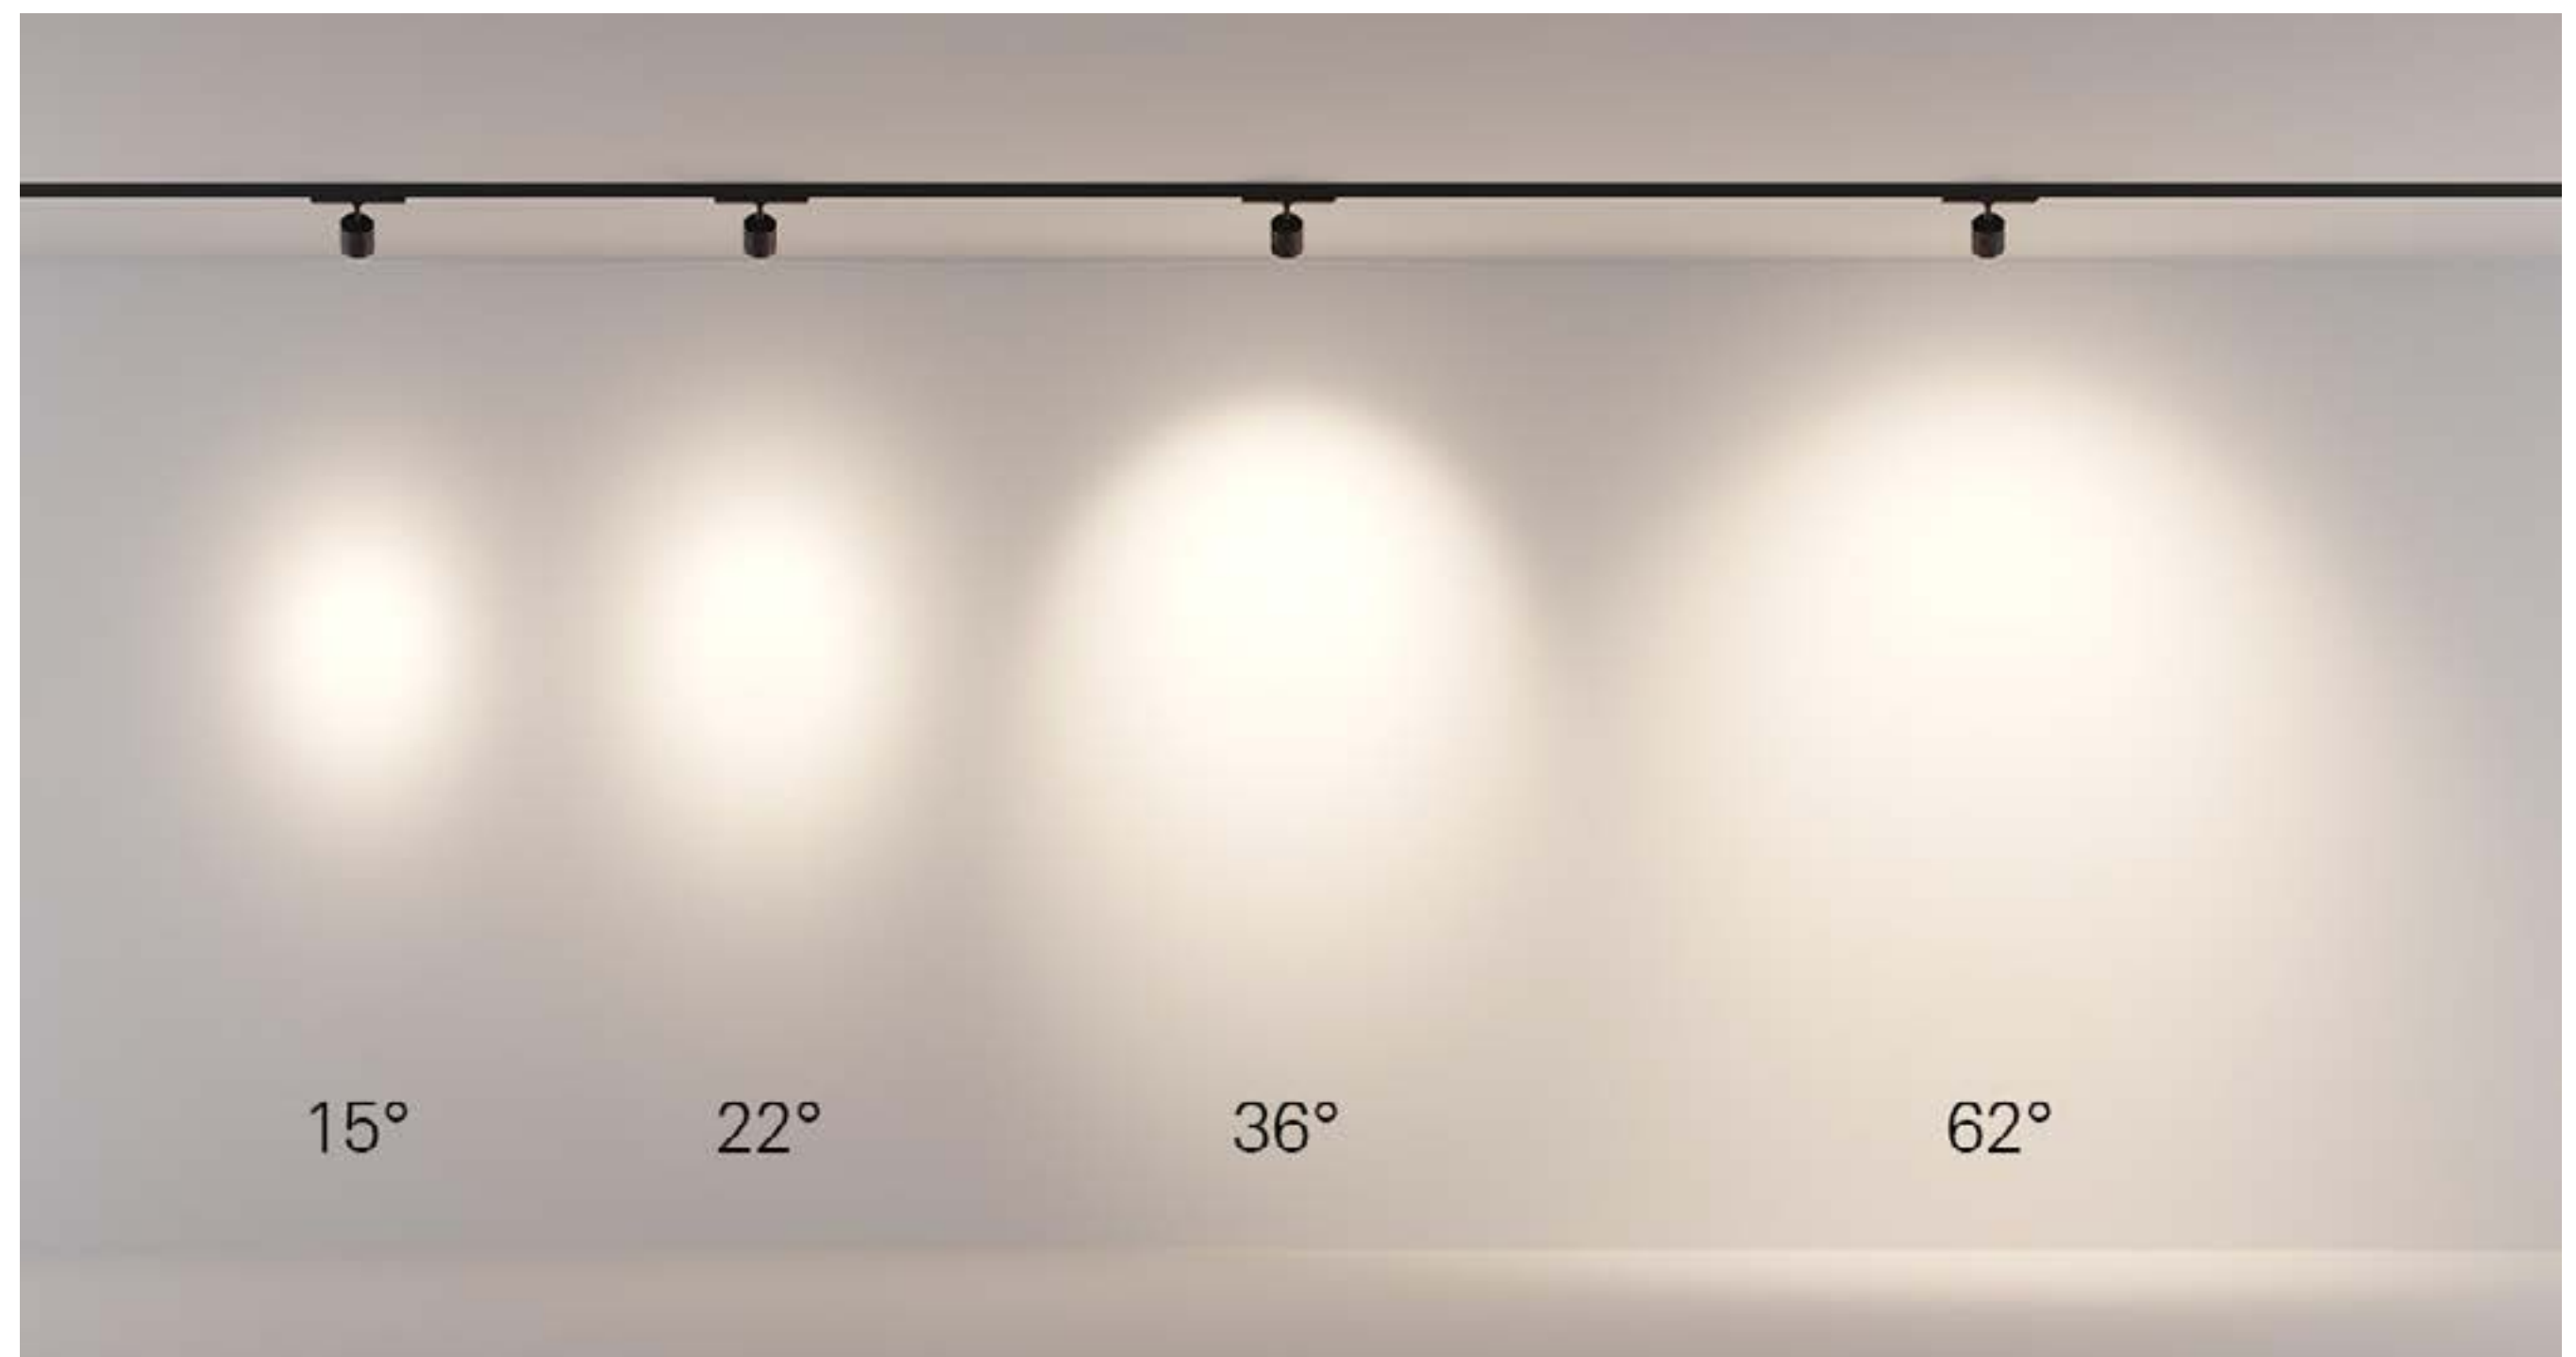

Rulo's compact design makes it unobtrusive, letting your products or displays take the spotlight. It can also be placed vertically, which is particularly useful in shop window displays.

Precision lenses. No glare. No halo.

Rulo's specially engineered lenses deliver precise, spill-free illumination, maximising lux per watt on the target surface.

At the same time, they offer high visual comfort: the light is soft, uniform, and free of the halo effect.

Wallwashing

Illuminate vertical surfaces evenly to enhance the perception of space. The Wallwasher delivers a smooth, even layer of light across the wall, minimizing shadows and hiding surface imperfections.

Use the dedicated accessory with the 36° beam angle lens for best results.

Oval light distribution

A freely rotatable oval lens directs the light precisely along the length of an area, minimizing wasted light outside the target zone.

Use the dedicated accessory with the 36° beam angle lens for best results.

Avoiding glare

No one likes glare. Rulo's lenses ensure effective glare control for a more comfortable visual experience.

HONEYCOMB FILTER

The honeycomb filter keeps light sources hidden unless the customer is directly beneath the luminaire. Use the dedicated accessory.

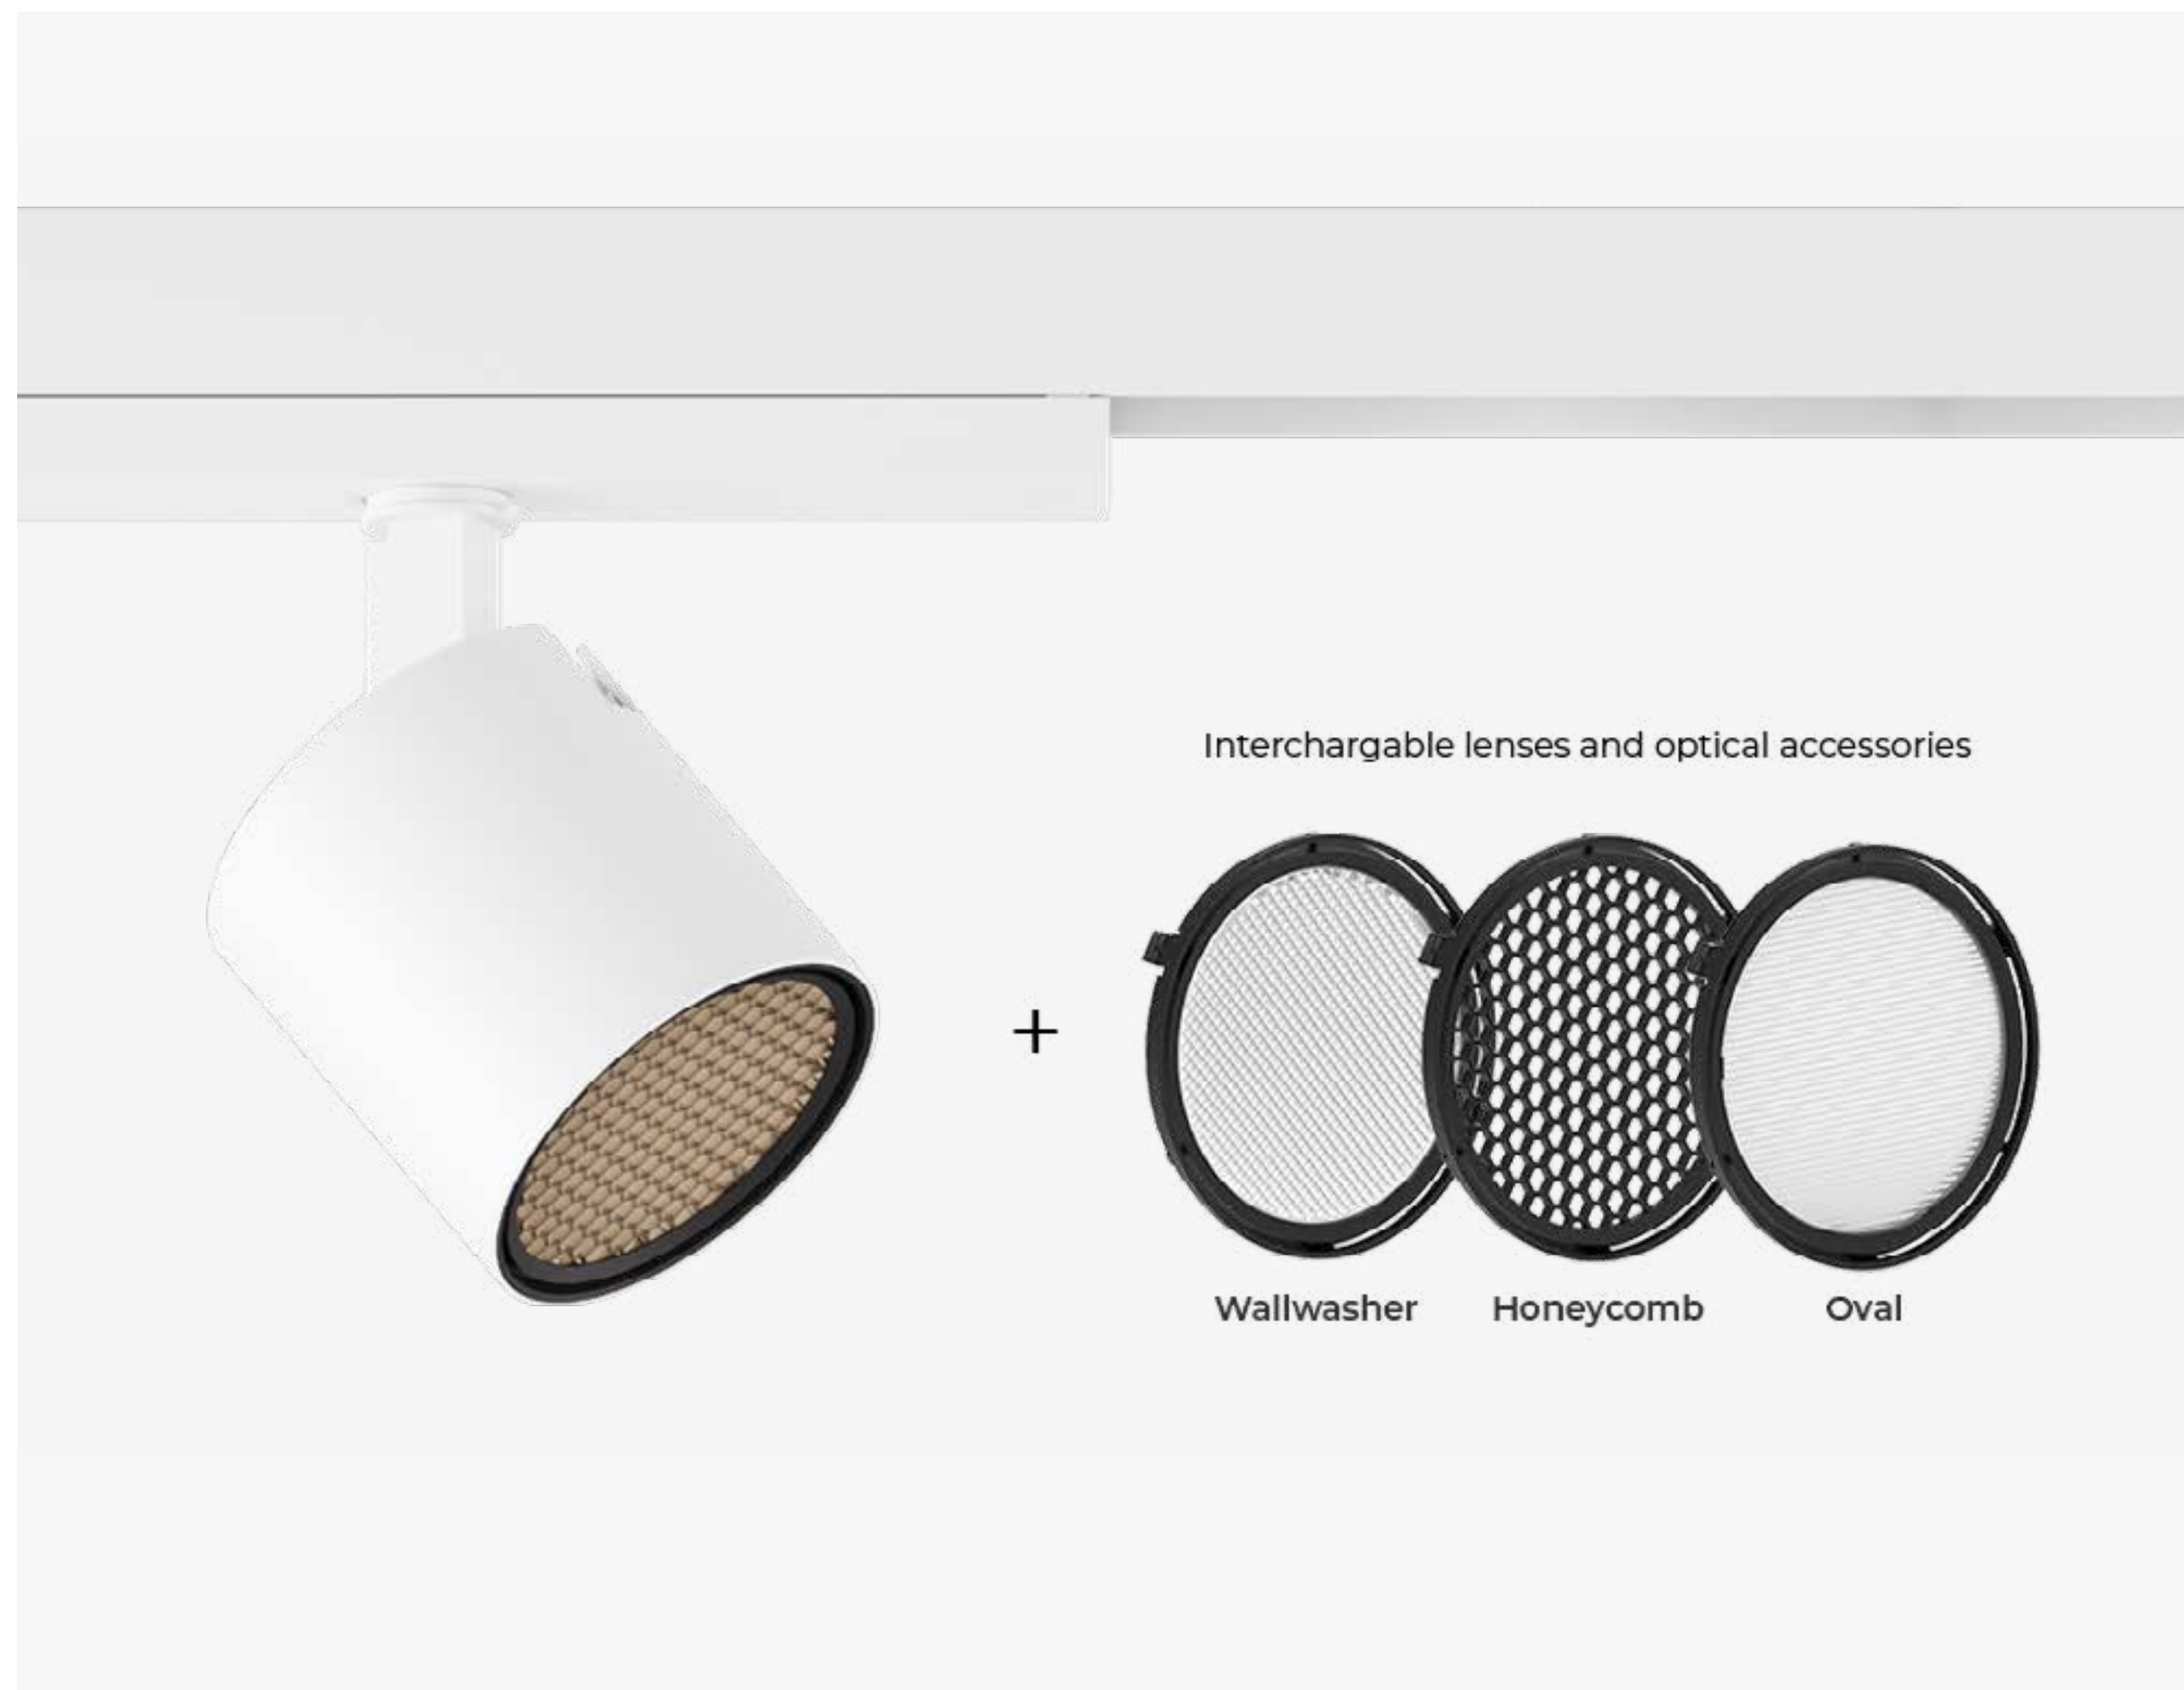

Dark lenses

Honeycomb filter

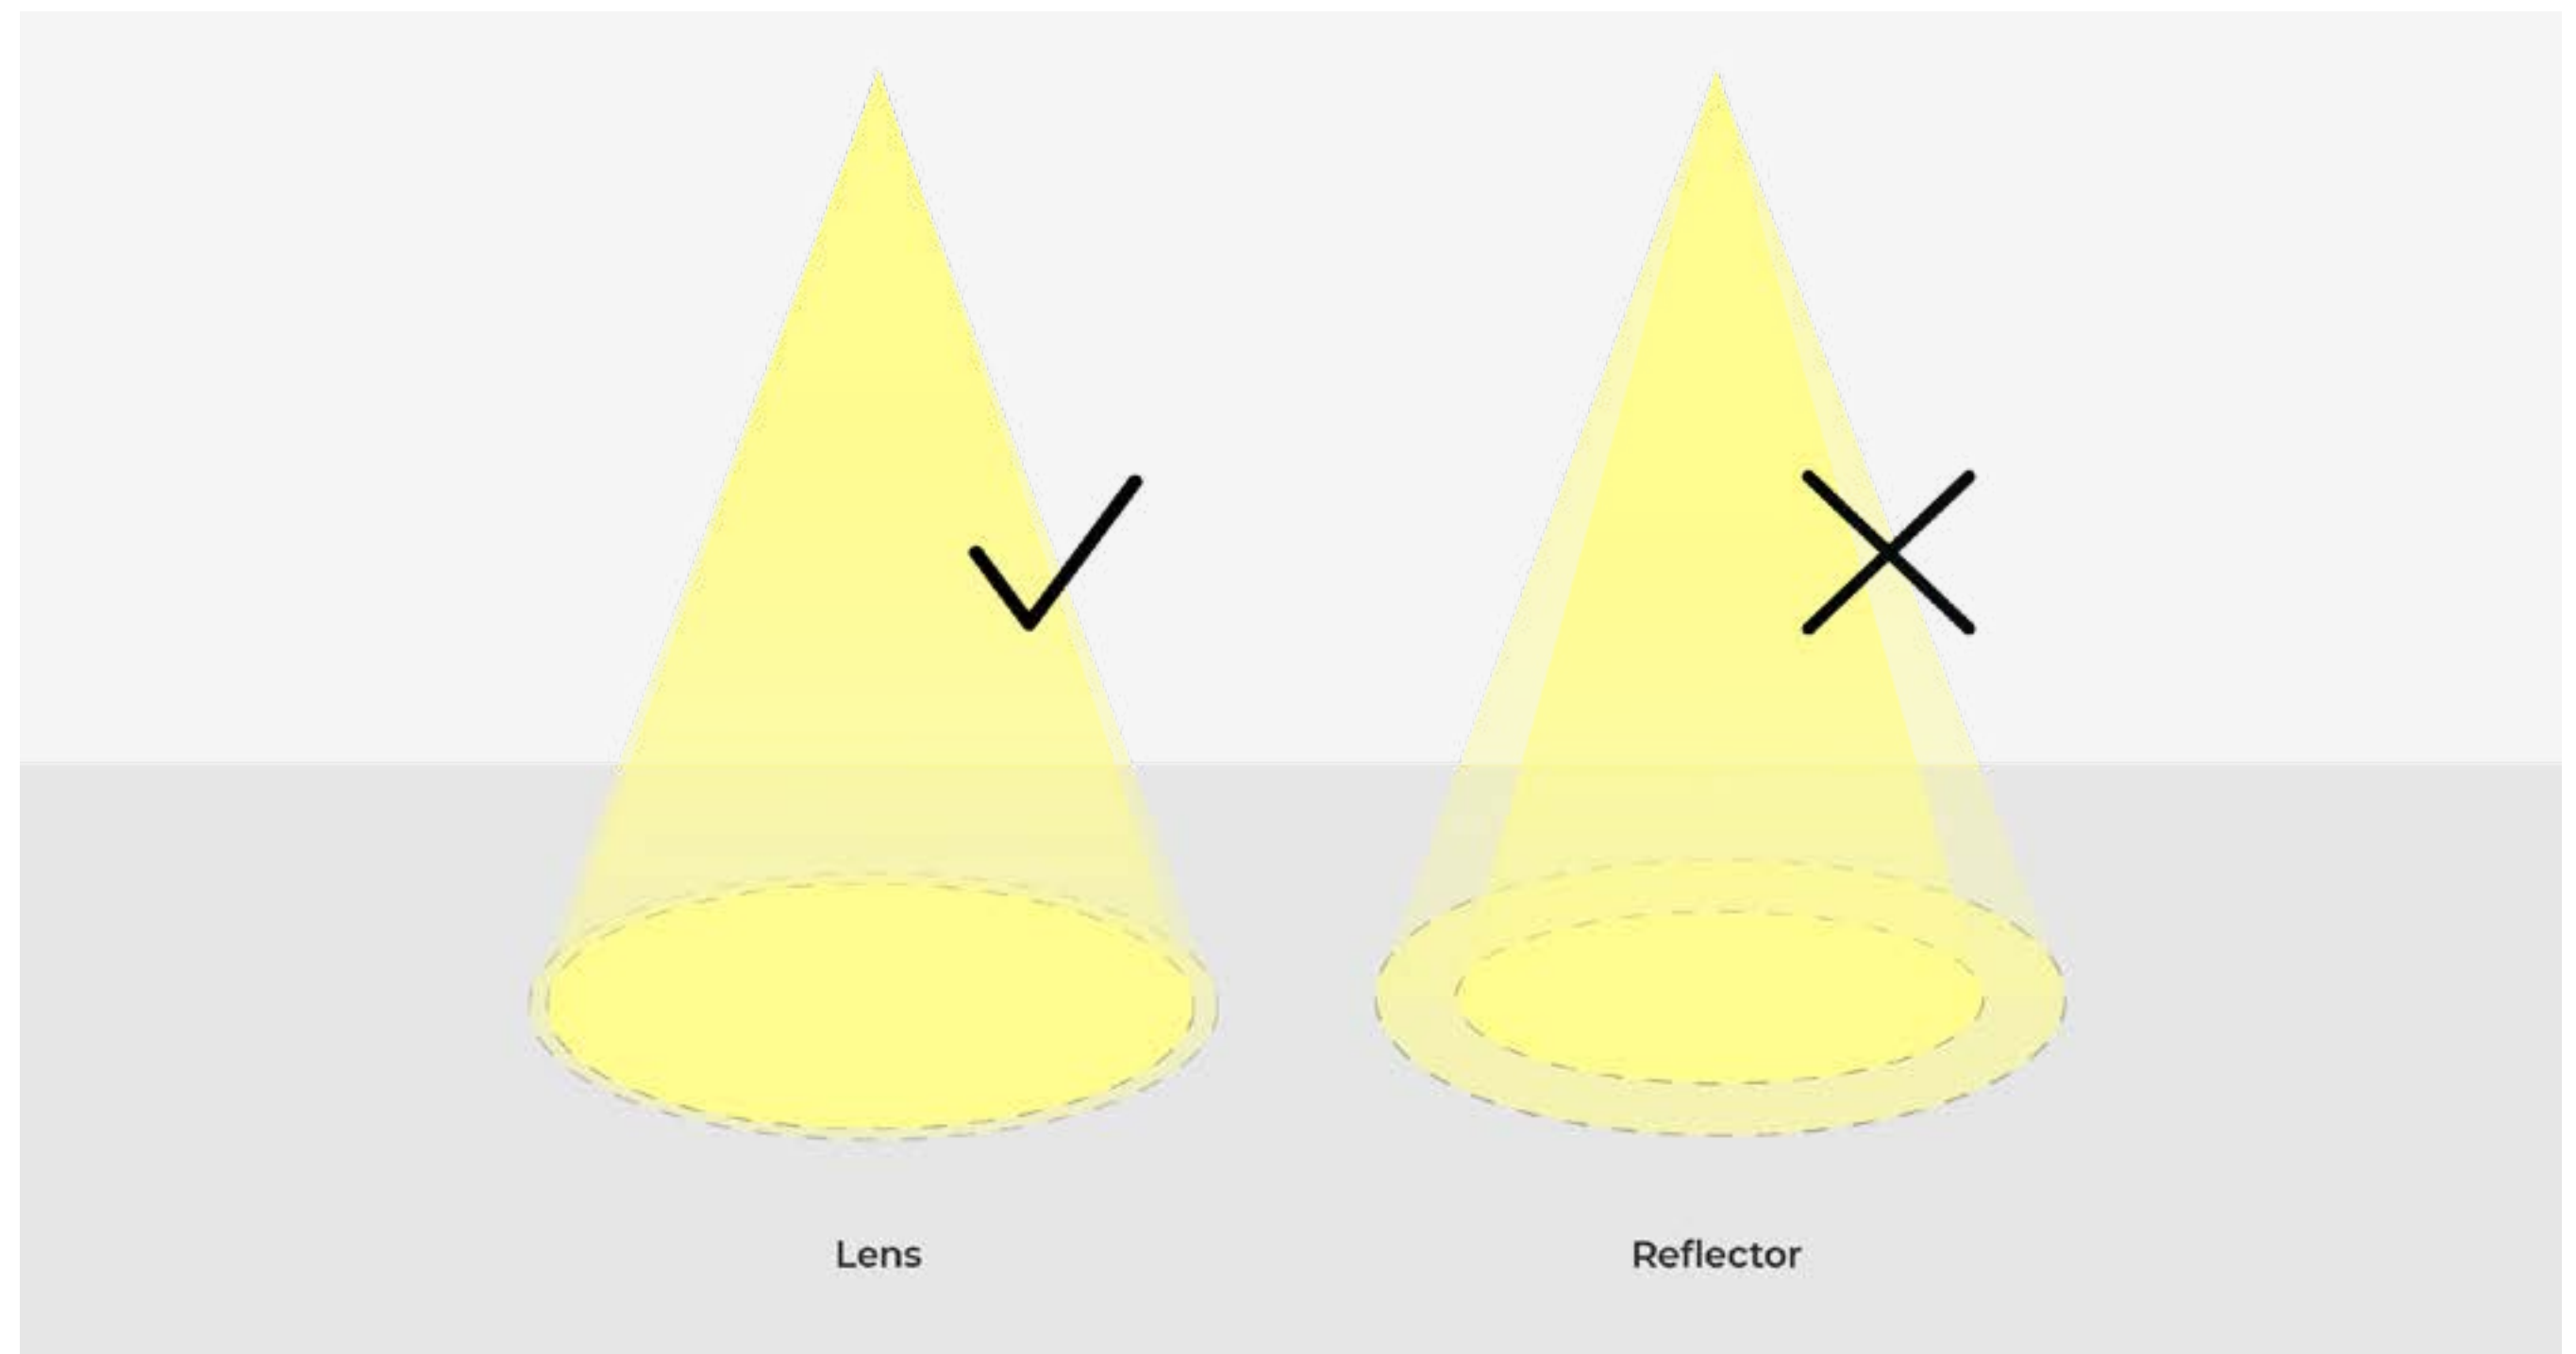

Easily add or replace different optical accessories

The system of interchangeable lenses and accessories (honeycomb, wallwasher, oval) offers limitless flexibility, both now and in the future, making it a practical and sustainable solution.

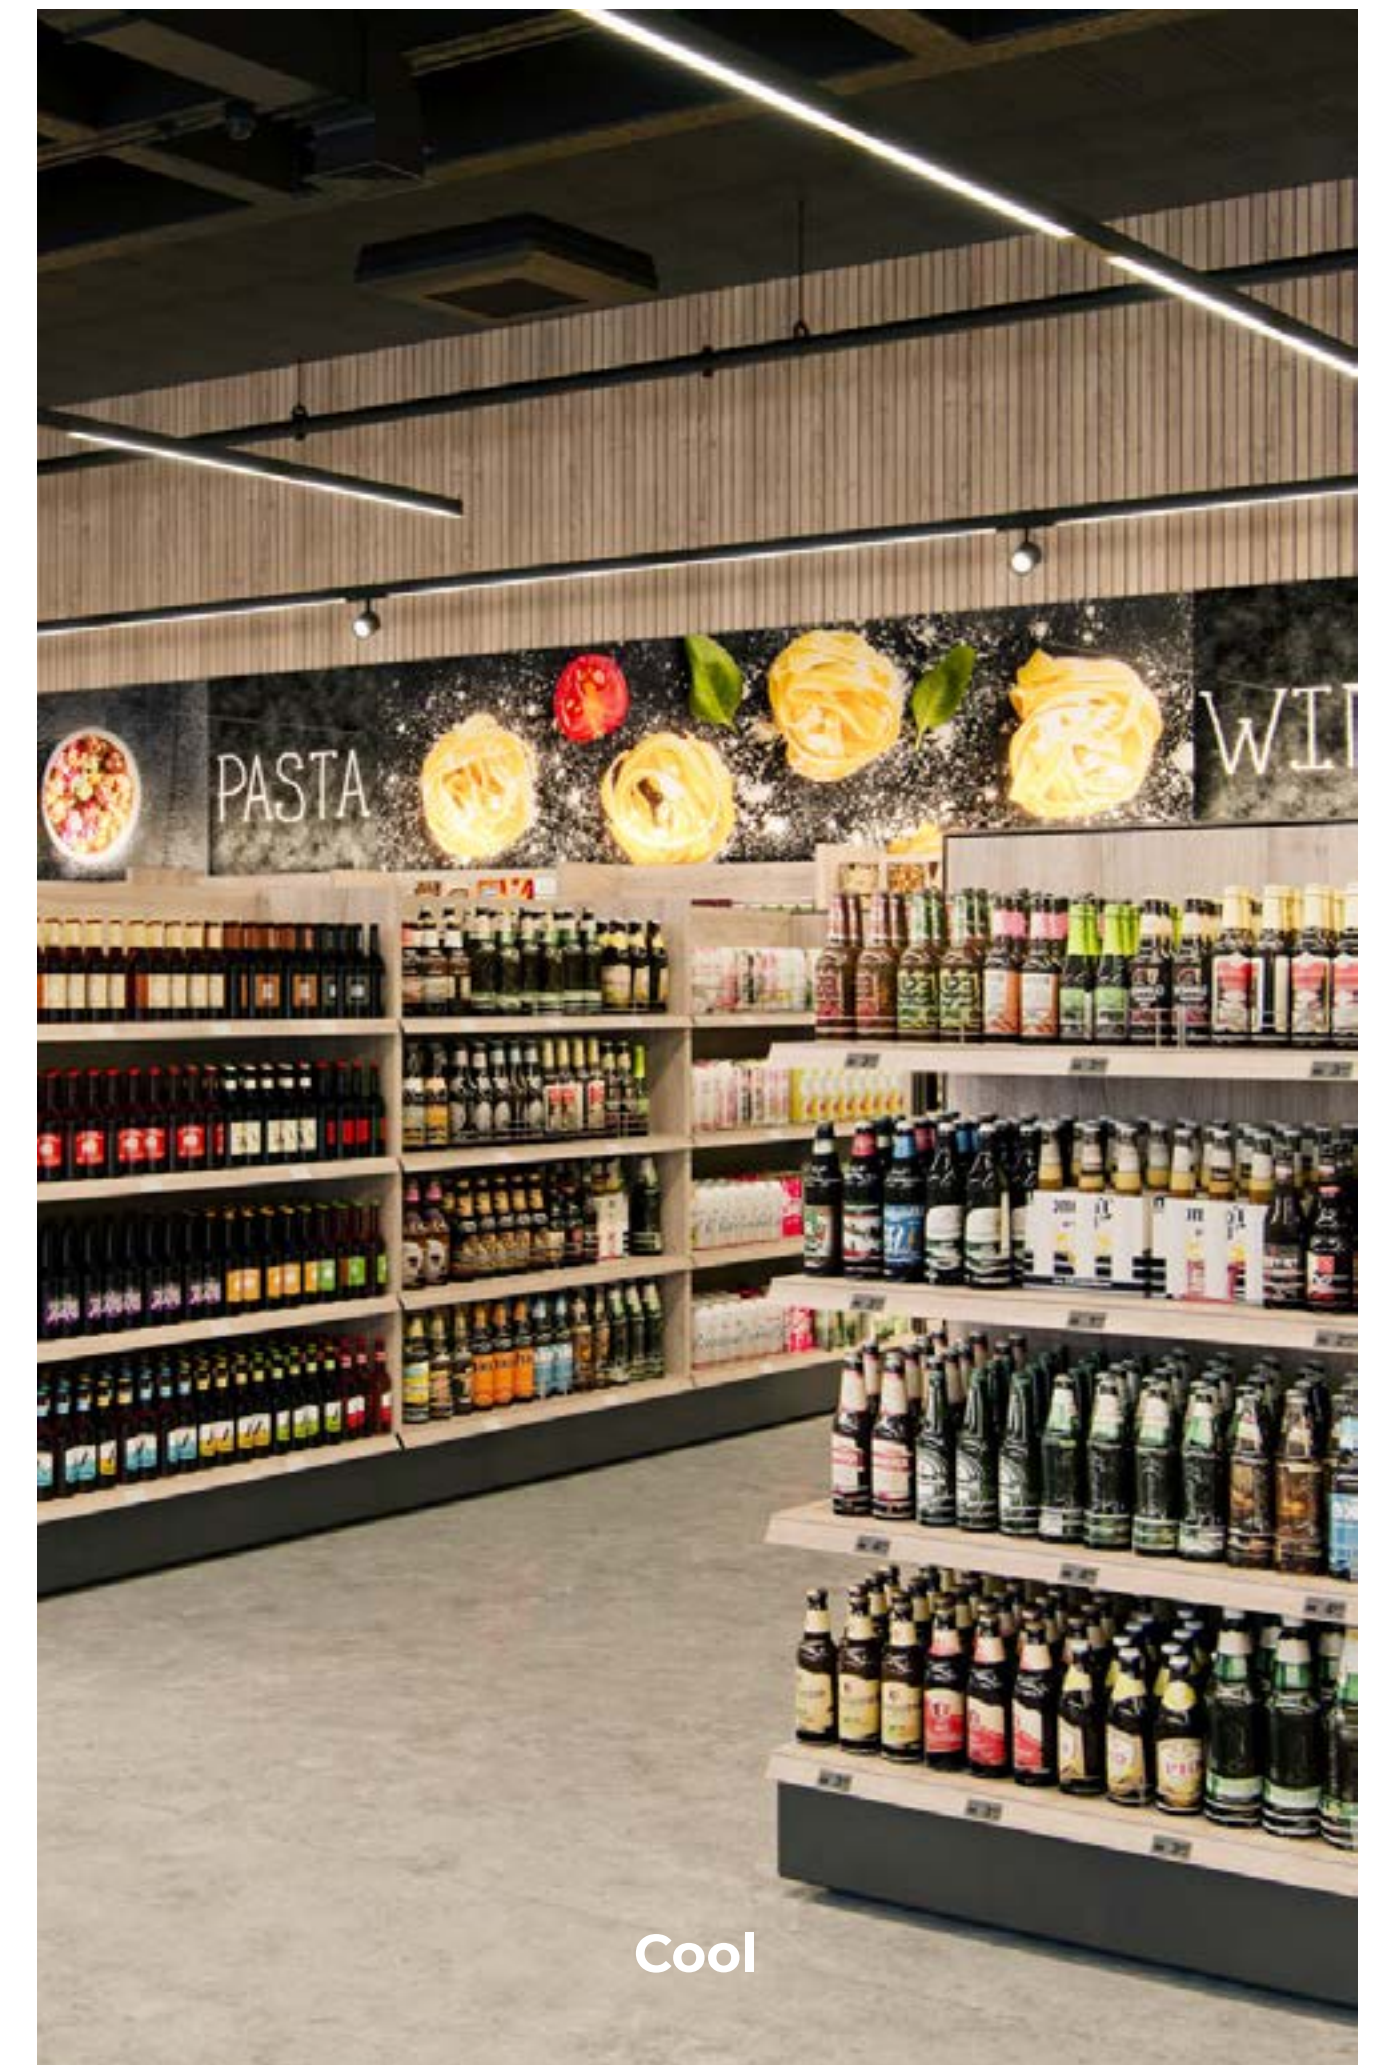

Better light control with lenses

For precise light control lenses are more suitable than reflectors. They offer a uniform, focused beam with minimal spill and higher efficiency, directing more light exactly where it's needed.

Tunable white

By adjusting the colour temperature of white light, you can mimic the natural daylight patterns or adapt the lighting to different activities and moods. Ranging from warm (2700K) to cool (6500K), from a single fixture.

Vivid COB

The high chromatic LEDs make colors appear more natural and vibrant. They are ideal for applications where visual impact matters, like supermarkets, grocery and fashion stores.
